

On minimally rainbow k -connected graphs

INGO SCHIERMEYER
TU Bergakademie Freiberg

An edge-coloured graph G is *rainbow connected* if any two vertices are connected by a path whose edges have distinct colours. A graph G is called *rainbow k -connected*, if there is an edge-colouring of G with k colours such that G is rainbow-connected.

In this talk we will study rainbow k -connected graphs with a minimum number of edges. For an integer $n \geq 3$ and $1 \leq k \leq n - 1$ let $t(n, k)$ denote the minimum size of a rainbow k -connected graph G of order n . We will compute exact values and upper bounds for $t(n, k)$.
