Bericht (mind. 1 Seite):

I will elaborate my Erasmus experiences by stating why I choose Prague. The reason I had chosen Prague was first i have already visited that place and loved the architecture and atmosphere there and second my host University Czech Technical University in Prague is considered to be one of the oldest university in all over Europe and the best one in Czech Republic.

Finding accommodation in a city which is known as the heart of Europe is not easy task but thanks to the accommodation system of my host university i got a room before even reaching there. The staff in office and guys in my dorm are really cheerful person. We used to talk about a lot of things and even crack a joke time to time. There was kind of survey visit at the beginning to the dorm where a guy from the staff let us know about the facilities in the dorm like multimedia room where they have multiple type of games, ping pong room even though i haven't seen anyone playing ping pong there still it's always full of people because it is the place for every single party in the dorm and also there was a gym at the basement, so we don't even get out of the building to do some exercise.

International Student Club (ISC) is a non-profit organization which arrange multiple events and trips just for Erasmus students so that they won't feel lonely away from home. Even though i have missed a lot of initial events because I went there late due to some visa issues but still i have been to a lot of events organized by ISC from Halloween to Christmas feast and then farewell party. Every event was a blast. In masarykova dorm there's a pub in the basement. Every Tuesday we used to go there have some drinks. The best part of my experience with ISC was Ice skating tour because that was my first time ever trying ice-skating and i found out it's not as hard as it seems or maybe i'm a natural. Beside ice-skating, due to social gatherings i tried bouldering and rock climbing again for the first time and yes this was harder than it looks.

Regarding Studying i believe they have really helpful and highly motivated professors who want us to learn something new, so they will repeat the lecture if they have to, just to make sure that we are confident that we understand the concept. Besides that they have fully equipped labs with different kind of tools from hardware to multi OS systems. Even though i am from Faculty of information technology i have some courses from faculty of electrical engineering as well. The one thing i love about Faculty of Electrical Engineering is their elevators. It was the first time i have seen elevators like those, you don't have to press the button and wait like usual elevators but there's a continuous loop of compartment going up and down. You just have to slide in to compartment and get off to the floor you wants. It doesn't stop you have to be a little hurry. I think its fun that way. There was a really fancy and huge library called NTK (Národní Technická Knihovna) which is 6 floors tall and surrounded by black glasses. On the ground floor there's a cafe where i usually grab a coffee with friends or just go there to relax for a bit.

I am glad that i was there to celebrate all the festivals like New year, Christmas, Halloween with my international and Czech friends and to know thier culture and food better. I am really great full to my home University and to the Erasmus Community that they gave this incredible opportunity to me to experience the world outside and know there people and their ways of life and to made aware of

my mind for the opportunities i haven't thought of before. At the end, I encourage every single student to not miss this great opportunity and go abroad for at least one semester and feel that the world is so big to discover and yet so small that we all have similar mindset and we are not different from each other.
