Research and development of modern, innovative, and functional materials with pronounced potentials for profound applications in science and technology.

**What characterises the Master’s degree programme Advanced Functional Materials?**

The advanced chemical and physical aspects of modern materials and the transfer of skills in synthesis, development, analysis and manufacturing of functional materials are the key issues of the programme Advanced Functional Materials. The research-oriented extension and intensification of physical and chemical knowledge is based on advanced practical training in actual research fields in a modern laboratory environment.

„Graphene, an atomically thin sheet of carbon, is a good example for an advanced functional material. It combines mechanical strength with extra-ordinary flexibility, is highly transparent for light but impermeable for gases, has high electrical and thermal conductivity. These properties render graphene in combination with other advanced materials useful for a large number of prospective applications in sensors, displays, flexible and printed electronics, lightweight composites, and so on.” (Prof. Dr. Thomas Seyller, Speaker of the university’s focus area „Intelligent Systems and Materials” and of the DFG priority program 1459 „Graphene”)

**Degree Structure**

The entire programme Advanced Functional Materials can be studied in English language. Compulsory subjects are also offered in German language. Modules for a profound language training enhance the capability of an unrestricted communication in international research communities.

**Basic Modules (1st - 3rd semester)**

- Advanced Concepts in Chemistry and Physics
- Synthetic Methods in Chemistry
- Material Characterisation
- Sustainable Chemical Production Technologies
- Surfaces, Thin Films and Interfaces
- Semiconductor Physics – Nano Structures
- Physics of Solar Cells
- Facets of Materials Science

**Specialisation Modules (1st - 3rd Semester)**

- Research Project
- German as a foreign language or English (depending on language competence level)
modules must be selected: e. g. Polymer Materials, Colloids & Interfaces, Lab Course Colloids & Interfaces, Circular economy of polymers, Computational Chemistry, Molecular electronics, Sustainable Energy Infrastructure, Introduction to magnetic materials, Sensor Systems, Materials in Micro and Nano Technologies, Modern Battery Materials, Complex Materials for Manufacturing

**Module Master Thesis (4th Semester)**

**Career Opportunities**

Current trends on the labour market indicate an increasing demand for graduates, who understand the processes in natural sciences on their transdisciplinary origin. Hence fields of work are for instance:

- Automotive Manufacturer
- Aerospace Industry
- Research Institutes
- Semiconductor Industry
- Chemical Industry
- Pharmaceutical Companies
- Energy Sector
- Life Science Sector

The Master’s degree provides in addition the opportunity for doctoral studies (Ph. D.) at an university or research center, such as Max-Planck Institute or Fraunhofer Gesellschaft.

**General information**

Faculty of Natural Sciences

Admission requirements: in general vocationally-qualifying university Bachelor’s degree in Chemistry or Physics from Chemnitz University of Technology or equivalent degree programme with regard to content, English language proficiency at Level B2 according to the CEFR

Standard period of study: 4 semesters

Degree: Master of Science (M.Sc.)

Start of the degree program: usually winter semester

Language of tuition: English
