What characterizes the Master degree program Value Chain Management?

The opening up of markets and the technical progress lead to continuous increase of competition in the markets. To ensure the enterprise’s success it is necessary to strengthen its competitive position and to improve its value chain. Synergy potentials need to be determined and exploited to create added value for the customers. Value Chain Management looks at the route taken by a product from the supplier to the producer and to the end-user. In doing so cost savings and performance improvements become possible. Value Chain Management focuses on creating competitive advantages and strengthening all strategically relevant corporate activities. A prerequisite therefore is extensive knowledge in marketing, production, corporate accounting and business information systems as well as in important neighbouring disciplines.

“The value chain is the source of corporate success. It requires systematic coordination of networks. Well-grounded knowledge in Business Administration and Business Information Systems is necessary to plan, manage and control value chains successfully. The Master’s program Value Chain Management meets these requirements and is unique among Germany’s universities.” (Prof. Dr. Peter Gluchowski, Professur für Systementwicklung und Anwendungssysteme in Wirtschaft und Verwaltung der Technischen Universität Chemnitz)
