This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Adaptation module

Module number	261035-201 (version 01)
Module name	International Strategy
Module coordinator	Professorship Business Administration – Organization and International Management
Content and qualification objectives	<p><u>Content:</u></p> <p>The module covers and discusses key concepts and theories of Global Strategy and International Management. Furthermore, various market entry strategies are analyzed, and the economic, political, social and cultural context factors are examined. The discussion focuses on the tension between global efficiency and the local adaptation of multinational companies.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students have in-depth knowledge of International Strategy and International Management and are able to critically analyze and apply key theories and concepts.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none">• Lecture: International Strategy (2 teaching units)• Exercise course: International Strategy (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none">• See the list of course materials• Basic knowledge of business administration and management is beneficial
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component:</p> <ul style="list-style-type: none">• 90-minute written examination on International Strategy (Examination number: 61627) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Adaptation module

Module number	260000-100 (version 03)
Module name	Independent scientific work and presentation (Selbstständiges wissenschaftliches Arbeiten und Präsentieren)
Module coordinator	Professorship Business Administration – Innovation Research and Technology Management
Content and qualification objectives	<p><u>Content:</u></p> <p>Fundamentals of scientific work and the theory of science:</p> <ul style="list-style-type: none"> • Basics of science and scientific work • Sources, procedure and style of scientific papers • information services and opportunities for literature research • Fundamentals of science theory and methodology • Quality criteria, misconduct and ethics in scientific work <p>Economy meets Science:</p> <p>The lecture series “Economy meets Science” includes lectures by companies, authorities and institutions that are intended to show the connection between economic teaching contents and practical problems. Results of seminars, projects, case studies or final papers in which practical problems have been addressed can also be presented. Results from research projects may also be prepared and presented.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, the students know the basics of scientific work and can apply them independently. They have the necessary prerequisites that enable professional access and handling of scientific texts. As a result, they are able to properly process and write scientific texts during the course of their studies and in practice. In addition, they have gained introductory and overview knowledge of the theory of science and empirical methods. Finally, they are also sensitized to the importance of method pluralism and ethics in science.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Fundamentals of scientific work and the theory of science (1 teaching unit) • Exercise course: Fundamentals of scientific work and the theory of science (1 teaching unit) • Lecture: Economy meets Science (2 teaching units) <p>The classes may be conducted in English or German.</p>
Requirements for participation (recommended knowledge and skills)	See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	<p>Meeting the admission requirement for the assessment component and successfully passing the module examination are prerequisites for the awarding of credit points.</p> <p>The admission requirement is the following examination prerequisite (EP) (no limit to the number of attempts):</p> <ul style="list-style-type: none"> • 6 tests during the semester as part of the exercise course fundamentals of scientific work and the theory of science <p>The examination prerequisite must be taken in German or in English.</p>

Core module

Module number	261042-301 (version 01)
Module name	Sustainability Management
Module coordinator	Professorship Business Administration – Corporate Environmental Management and Sustainability
Content and qualification objectives	<p><u>Content:</u></p> <p>Integrative management skills are essential for today's business and operational activities and decision-making. The integration of sustainability aspects can be understood as a different perspective and a systemic conceptualization of management activities rather than an addition. The module covers all essential business functions such as sustainable sourcing, production, logistics, supply chain management, organization, marketing, etc. In addition to the theoretical and conceptual work, various examples from different industries are discussed and analyzed.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to:</p> <ul style="list-style-type: none"> • Identify actors, problems and connections of functional areas in sustainability activities (knowledge), • Explain interactions and systemic processes in sustainability management (understanding), • Assess sustainability concepts in different contexts (application), • Determine sustainability instruments and limitations of sustainability innovations in holistic value chains (analysis), • Assess the prerequisites and conditions of sustainability-oriented strategies, innovations and instruments (evaluation).
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Sustainability Management (2 teaching units) • Exercise course: Sustainability Management (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	See list of recommended course materials (chair website, learning platform or set of slides)
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 90-minute written examination on Sustainability Management (Examination number: 62104) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year, normally in the summer semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	262032-300 (version 02)
Module name	Advanced Microeconomics
Module coordinator	Professorship Economics – Microeconomics
Content and qualification objectives	<p><u>Content:</u></p> <p>Building on introductory microeconomics, this lecture examines more advanced approaches in microeconomics. The following topics are discussed:</p> <ul style="list-style-type: none"> • The general theory of equilibrium (budget optimum, Lagrange approach, envelope theorem, Slutsky dissection, critique of equilibrium economics), • the theory of stochastic equilibria in economic distributions (maximum entropy), • behavioral economics as well as • dynamic systems and their application to microeconomic systems and • network theory and its application to microeconomic systems. <p>The application to economic examples and the theoretical historical classification of the discussed approaches are part of the course.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to classify, understand, assess and apply advanced microeconomic methods. They are familiar with the main approaches and theorems of the general equilibrium theory. However, they also know the limitations of the general equilibrium theory. Students will be familiar with alternative approaches and their advantages and disadvantages and can apply them to microeconomic issues and beyond. The alternative approaches include dynamic systems, network theory, maximum entropy and behavioral economics.</p>
Teaching methods	<p>The module teaching method is the lecture.</p> <ul style="list-style-type: none"> • Lecture: Advanced Microeconomics (2 teaching units) <p>The class may be conducted in English or German.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Required previous knowledge: advanced knowledge of basic principles of microeconomics, e.g. module Microeconomics II (Mikroökonomie II) (Module 262032-200) • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Advanced Microeconomics (Examination number: 63303) <p>The task will be given in German or English, depending on the language of the lecture. The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Specialization module

Module number	262034-301 (version 02)
Module name	Advanced Macroeconomics
Module coordinator	Professorship Economics – Macroeconomics
Content and qualification objectives	<p><u>Content:</u></p> <p>The module covers advanced topics of macroeconomics. Students gain in-depth insight into the stylized facts and various theories about growth, development, economic cycles and macroeconomic policy. Models from different schools of thought are critically discussed and compared.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to engage with macroeconomic academic literature as well as current political debates. They have developed critical thinking to assess the possibilities and limitations of various economic theories/models for practical problems. They can independently work on macroeconomic issues.</p>
Teaching methods	<p>The module teaching method is the lecture.</p> <ul style="list-style-type: none"> • Lecture: Advanced Macroeconomics (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Required previous knowledge: advanced knowledge of basic principles of macroeconomics, e.g. module Macroeconomics II (Makroökonomie II) (Module 262034-101) • Recommended previous knowledge: module Economic cycle and growth (Konjunktur und Wachstum) (Module 262031-300)
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Advanced Macroeconomics (Examination number: 63403) <p>The task will be given in English. The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Specialization module

Module number	220000-331 (version 02)
Module name	Game Theory (Spieltheorie)
Module coordinator	Dean of Student Affairs for all degree programs of the faculty of Mathematics (except for the degree programs Data Science, MINT, Advanced and Computational Mathematics)
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> Non-cooperative game theory: Nash equilibria, correlated equilibria, evolutionary stable strategies, partial game perfect equilibria, sequential equilibria, trembling-hand-perfect equilibria cooperative game theory: core, kernel, nucleolus, Shapley value, negotiation solution <p><u>Qualification objectives:</u></p> <p>Students are able to model strategic interdependencies, which typically occur in economic and political contexts, using tools of game theory. They can classify games into cooperative and non-cooperative, strategic and in extensive form, with perfect and imperfect information and apply appropriate equilibrium concepts to them. Students are also proficient in calculating equilibria in simple situations. They are able to deduce and contrast their game theory features.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> Lecture: Game Theory (Spieltheorie) (4 teaching units) Exercise course: Game Theory (Spieltheorie) (2 teaching units) <p>The classes may be conducted in English or in German.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> 30-minute oral examination on the contents of the module (Examination number: 20056) <p>The assessment component must be taken in English or in German.</p>
Credits and grades	<p>This module is worth 10 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered every second academic year in the winter semester.
Number of hours	The module requires students to complete a total of 300 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Specialization module

Module number	261033-310 (version 01)
Module name	Resource Efficiency from an Economic Perspective
Module coordinator	Professorship Business Administration III – Management Accounting and Controlling
Content and qualification objectives	<p><u>Content:</u></p> <p>The module provides an overview of the embedding of resources and resource efficiency in business administration. Based on the discipline-specific concepts of resources and efficiency, the students are introduced to the methods of internal management accounting, which can be used to capture and analyze resource needs and consumption and thus also contribute to the evaluation and management of resource efficiency. Individual topics include:</p> <ul style="list-style-type: none"> • Resources and resource efficiency in business administration • Production and cost theory • Cost accounting • Investment accounting • Selected approaches to cost management <p><u>Qualification objectives:</u></p> <p>Students will gain knowledge of the business perspective on resources and resource efficiency and production and cost theory, including production functions. They will be able to apply and evaluate selected methods of cost accounting and cost management as well as investment accounting.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Resource Efficiency from an Economic Perspective (2 teaching units) • Exercise course: Resource Efficiency from an Economic Perspective (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 90-minute written examination on Resource Efficiency from an Economic Perspective (Examination number: 61424) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered every second academic year in the winter semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Specialization module

Module number	261033-311 (version 01)
Module name	Life Cycle Engineering
Module coordinator	Professorship Business Administration III - Management Accounting and Controlling
Content and qualification objectives	<p><u>Content:</u></p> <p>The module provides an overview of the basic ideas and theoretical foundation of Life Cycle Engineering (LCE) and details related methods and modeling approaches. Individual topics include:</p> <ul style="list-style-type: none"> • Product lifecycle models • Approaches to assess the technical, economic and ecological performance of products and product systems • Models for multidimensional analysis • Technology and material selection • Case studies <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students have developed an understanding of the necessity to include technical, economic and ecological objectives in decisions, specifically in the early stages of the product life cycle. A particular emphasis is also placed on the necessary (evaluation) approaches and models, which students have expanded their knowledge on and can be applied in a case study carried out in small groups.</p>
Teaching methods	<p>The module teaching methods are lecture and case study.</p> <ul style="list-style-type: none"> • Lecture: Life Cycle Engineering (2 teaching units) • Case Study: Life Cycle Engineering (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of two assessment components. The student must take the following specific assessment components:</p> <ul style="list-style-type: none"> • 10-minute oral presentation on the case study Life Cycle Engineering (Examination number: 61428) • 60-minute written examination on Life Cycle Engineering (Examination number: 61421) <p>The assessment components are to be produced in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment components are assessed and how the module grade is calculated.</p> <p>Assessment components:</p> <ul style="list-style-type: none"> • Oral presentation on the case study Life Cycle Engineering, weighting 3 – pass required • Examination on Life Cycle Engineering, weighting 7 – pass required
Frequency	The module is offered each academic year, normally in the summer semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	261037-300 (version 02)
Module name	Supply Chain Management
Module coordinator	Professorship Business Administration – Production and Industrial Management
Content and qualification objectives	<p><u>Content:</u></p> <p>The module deals with supply chain management. It focuses on interconnected production and logistics companies that interact to meet customer needs. Individual topics include:</p> <ul style="list-style-type: none"> • Building and expanding on knowledge of basic concepts and structures of supply chains based on theoretical approaches and real-world examples • Analysis and design of robust supply chains considering various sources of uncertainty • Experiencing the dynamics in supply chains through the beer game • Model-based analysis of the bullwhip effect, its causes as well as methods to overcome the effect • Modeling and solving operational decision problems of inventory management under certainty and uncertainty from a company-specific perspective • Central and contract-based coordination of operational inventory management decisions based on contract theory from a supply chain perspective • Modeling and solving strategic-tactical decision problems of the design of supply chains using warehouse location, facility location and center problems <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to identify and explain business challenges in the interaction of companies in complex, networked value creation processes. They can discuss supply chain dynamics based on the bullwhip effect and identify and justify solution strategies to overcome it. Students are able to describe, model and solve operational decision-making problems in inventory management. They will be able to distinguish between single-company-optimal and supply-chain-optimal decisions. In addition, they can determine coordinating decisions based on contract theory in simple supply chains and have an understanding of the transfer to complex supply chains. Finally, they are able to name and discuss decision problems in the design of supply chains as well as to model selected decision problems and solve them using heuristic methods.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Supply Chain Management (2 teaching units) • Exercise course: Supply Chain Management (1 teaching unit) <p>The classes may be conducted in German or in English.</p>
Requirements for participation (recommended knowledge and skills)	See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Module examination	The module examination consists of one assessment component. <ul style="list-style-type: none">• 60-minute written examination on Supply Chain Management (Examination number: 61808) The assessment component must be taken in German or in English.
Credits and grades	This module is worth 5 credit points. Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	262033-300 (version 01)
Module name	Economics of Climate Change and Sustainable Finance
Module coordinator	Junior Professorship Economics
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Fundamentals of sustainability in the context of economics and finance • Climate financing and regulatory measures to mitigate climate change • Policy instruments in regard to their ability to combat climate change and promote sustainability • Assessment of the role and potential contribution of central banks and macroprudential regulatory authorities in promoting the transition to a sustainable economy • Green regulatory instruments <p><u>Qualification objectives:</u></p> <p>The module aims to broaden the students' understanding of the fundamental role of green and sustainable finance principles to address the risks of climate change for the real economy, influence monetary policy and ensure financial stability. The focus is on the transformative role of central banks in climate change, with their key actions in addressing transition risks and directing the financial system towards a sustainable future.</p>
Teaching methods	<p>The module teaching method is the lecture.</p> <ul style="list-style-type: none"> • Lecture: Economics of Climate Change and Sustainable Finance (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Economics of Climate Change and Sustainable Finance (Examination number: 66501) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	262034-300 (version 01)
Module name	Climate Economics
Module coordinator	Professorship Economics – Macroeconomics
Content and qualification objectives	<p><u>Content:</u></p> <p>The module covers advanced topics in environmental economics. The focus is on the macroeconomic analysis of climate change. Topics include the limits of growth, tipping points, damage functions, degrowth vs. green growth and the evaluation of policy options. In particular, integrated ecology-macroeconomics-models are used.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to engage with relevant academic literature as well as current policy debates. They have developed critical thinking to assess the possibilities and limitations of different economic theories and models for real-world problems. They can independently work on issues of the economics of climate change.</p>
Teaching methods	<p>The module teaching method is the lecture.</p> <ul style="list-style-type: none"> • Lecture: Climate Economics (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Advanced knowledge of economics • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs, if the students have the required previous knowledge.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Climate Economics (Examination number: 63508) <p>The task will be given in English. The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	262036-300 (version 02)
Module name	Empirical Economics I
Module coordinator	Junior Professorship Economics – Econometrics and Empirical Economics
Content and qualification objectives	<p><u>Content:</u></p> <p>The module provides an extensive insight into the application of important empirical methods (supported by statistical software). Topics include the linear regression model, multiple regression, interference, hypothesis testing, model validation, nonlinear models, instrument variables and panel data.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to assess the validity of econometric studies presented to them as well as conduct their own empirical studies.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Empirical Economics I (2 teaching units) • Exercise course: Empirical Economics I (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	Required previous knowledge: basic knowledge of empirical economic research, e.g. Module Introduction to Empirical Economics (Module 262036-200)
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Empirical Economics I (Examination number: 63306) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	262036-301 (version 02)
Module name	Empirical Economics II
Module coordinator	Junior Professorship Economics – Econometrics and Empirical Economics
Content and qualification objectives	<p><u>Content:</u></p> <p>The module provides an in-depth insight into the application of important empirical methods (supported by statistical software). Topics include time series data, ARMA models, dynamic estimation, forecast models, multivariate time series models, deterministic and stochastic trends and (co-)integration.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to assess the validity of econometric studies presented to them as well as conduct their own empirical studies.</p>
Teaching methods	<p>The module teaching method is the lecture.</p> <ul style="list-style-type: none">• Lecture: Empirical Economics II (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	Required previous knowledge: knowledge of empirical economic research, e.g. Module Empirical Economics I (Module 262036-300)
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none">• 60-minute written examination on Empirical Economics II (Examination number: 63307) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	263031-301 (version 01)
Module name	Strategic IT Management
Module coordinator	Professorship Business Information Systems – Business Information Systems I
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Approaches to IT management and positioning of IT in the company • IT strategy and business/IT alignment • IT governance and COBIT • IT service management and ITIL • Quality management and well-known representatives (EFQM, Six Sigma) • Maturity models and CMMI • IT risk management <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to name and classify the essential design tasks of strategic IT management. They are familiar with the associated frameworks and can select and apply them in specific scenarios. Furthermore, they are able to evaluate the different roles and positions of IT in companies and their impact on the design of strategic IT management.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Strategic IT Management (1 teaching unit) • Exercise course: Strategic IT Management (2 teaching units) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Basic knowledge of information management • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 60-minute written examination on Strategic IT Management (Examination number: 65212) <p>The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	264032-301 (version 01)
Module name	Technology Law – Case Study
Module coordinator	Professorship Private Law and Intellectual Property Rights (Law II)
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Technical law/technology law/new technologies law • Showing the interfaces of law and technology • Product responsibility/liability (civil and criminal law bases – also comparative) • Standardization, certification and accreditation • European and national market surveillance • Current topics related to technical law (depending on the group of participants), e.g. cloud computing, e-commerce, electromobility, industry 4.0, artificial intelligence <p><u>Qualification objectives:</u></p> <p>After successful completion of this interdisciplinary module, students are able to identify and contrast the interfaces between law and technology and independently apply the fundamental knowledge previously taught in blocks to company-related cases.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Technology Law – Case Study (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<p>Relevant legal texts:</p> <ul style="list-style-type: none"> • Will be announced in class <p>Materials (also see library):</p> <ul style="list-style-type: none"> • Ensthaller/Gesmann-Nuissl/Müller: Technikrecht – Rechtliche Grundlagen des Technologiemanagements, Springer www.springerlink.com <p>Further, topic-specific literature and materials will be announced in class.</p>
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component (Examination number: 64222), including:</p> <ul style="list-style-type: none"> • 3-times 15 multiple-choice tasks on Technology Law – Case Study and • 2 written assignments (scope: maximum 5 pages each, processing period: 4 weeks each) on Technology Law – Case Study <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year, normally in the winter semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	264032-302 (version 01)
Module name	Intellectual Property Law (Innovation Law) – Case Study
Module coordinator	Professorship Private Law and Intellectual Property Rights (Law II)
Content and qualification objectives	<p><u>Content:</u></p> <p>The module deals with the characteristics of intellectual property. In learning blocks, the various intellectual properties and their protection possibilities (copyright and industrial property rights: e.g. patents, design protection/registered design, trademark) are presented, as well as their areas of protection, the legal consequences in case of infringement and the exhaustion of intellectual property rights. European and international references (e.g. territorial principle, international treaties) are discussed at relevant points.</p> <p><u>Qualification objectives:</u></p> <p>As part of the seminar, students learn to apply the fundamental knowledge previously taught in blocks directly to company-related case studies, thereby gaining an in-depth application-oriented approach to the subject matter and qualifying themselves for strategic positions in economic areas.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Intellectual Property Law (Innovation Law) – Case Study (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<p>Legal texts:</p> <ul style="list-style-type: none"> • Urheberrechtsgesetz (UrhG) • Markengesetz (MarkenG) • Patentgesetz (PatG) <p>Further literature and materials will be announced in class.</p>
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component (Examination number: 64223), including:</p> <ul style="list-style-type: none"> • 3-times 15 multiple-choice tasks on Intellectual Property Law (Innovation Law) – Case Study and • 2 written assignments (scope: maximum 5 pages each, processing period: 4 weeks each) on Intellectual Property Law (Innovation Law) – Case Study <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year, normally in the summer semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	260000-304 (version 01)
Module name	Seminar Sustainability, Innovation & Marketing
Module coordinator	Dean of Student Affairs for the Master's programme Business & Economics
Content and qualification objectives	<p><u>Content:</u></p> <p>In the seminar, current topics in the areas of sustainability, innovation and marketing will be worked on independently as part of individual or team work.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students will be able to independently work on a scientific assignment within a given time. In the case of teamwork, social skills are promoted through collective editing and coordination.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Sustainability, Innovation & Marketing (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • Creditable study achievement: written paper (scope: ca. 15 pages, processing period: 16 weeks) and 20-minute presentation on the Seminar Sustainability, Innovation & Marketing (Examination number: 60019) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	261031-313 (version 01)
Module name	Introduction to International Tax Management
Module coordinator	Professorship Business Administration I – Business Taxation and Auditing
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Fundamentals of the origin and avoidance of double taxation of income • Fundamentals of abuse prevention (BEPS, Pillar II, Pillar I) • Fiscal aspects in the EU <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students will be able to understand and recognize the origin of double taxation. They know uni-, bi- and multilateral rules for the avoidance of under- and double taxation. Students know the most important national and international regulations to avoid excessive taxation.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Introduction to International Tax Management (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	Basic knowledge about the taxation of corporations.
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • Creditable study achievement: 20-minute presentation on Introduction to International Tax Management with a detailed handout (Examination number: 61229) <p>The study achievement is credited, if it is graded at least “sufficient”.</p> <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	261033-312 (version 01)
Module name	Life Cycle-oriented Management
Module coordinator	Professorship Business Administration III – Management Accounting and Controlling
Content and qualification objectives	<p><u>Content:</u></p> <p>The module provides an overview of life cycle models and -concepts. Subsequently, students are presented lifecycle-related design tasks and the respective tools, that are relevant for the strategic management. The focus is on selected lifecycle-related decision models and methods such as:</p> <ul style="list-style-type: none"> • Life Cycle Costing/Total Cost of Ownership • Dynamic investment accounting for profitability, service life and replacement timing decisions • Flow cost accounting • Key figures and key figure systems • Business model development <p><u>Qualification objectives:</u></p> <p>The participants of the module are familiar with and can explain life-cycle decisions from a business perspective and have also gained specific knowledge regarding methods for preparing decisions.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Life Cycle-oriented Management (2 teaching units) • Exercise course: Life Cycle-oriented Management (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 90-minute written examination on Life Cycle-oriented Management (Examination number: 61420) <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year, normally in the summer semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Specialization module

Module number	261034-307 (version 02)
Module name	Banking & Risk Management
Module coordinator	Professorship Business Administration – Banking and Corporate Finance
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Fundamentals of banking management • Risks in banking • Regulatory requirements • Risk management and risk control as a process • Quantitative risk management and risk modelling • Financial instruments in risk management <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to</p> <ul style="list-style-type: none"> • explain the nature of banking service, • identify risks in banking, explain procedures for quantifying them and apply these procedures, • describe key elements of banking regulation, • define the concept of risk management and describe the tasks of risk management, • explain interest rate, credit and liquidity risk management, • explain and differentiate quantitative procedures in risk management.
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Banking & Risk Management (2 teaching units) • Exercise course: Banking & Risk Management (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Recommended: knowledge of financial institutions as well as financing and financial management • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation as well as for other degree programs.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 90-minute written examination on Banking & Risk Management (Examination number: 61527) <p>The task will be given in English. The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

Specialization module

Module number	261034-309 (version 02)
Module name	Applied Energy & Climate Finance
Module coordinator	Professorship Business Administration – Banking and Corporate Finance
Content and qualification objectives	<p><u>Content:</u></p> <p>As part of the seminar, students will independently and individually work on current topics in the field of energy and climate finance and present the results in a seminar paper and a presentation. The topics include climate risks for companies, stranded assets, green bonds, emission rights and their trading in the EU (EU ETS), global emission rights, energy security issues related to the supply security of crude oil and natural gas, their costs and financialization in futures markets, sustainability in the energy industry and other interdisciplinary topics. The seminar also provides in-depth fundamentals in the methodology of scientific work and presentation.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to independently work on, present and defend a scientific task from a research area or the interface between research areas within a given time.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Applied Energy & Climate Finance (2 teaching units) <p>The class may be conducted in English or in German.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Recommended: knowledge of financing and financial management • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of two assessment components. The student must take the following specific assessment components:</p> <p>Creditable study achievements:</p> <ul style="list-style-type: none"> • 20-minute presentation and 5-minute complementary report on Applied Energy & Climate Finance (Examination number: 61523) • Seminar paper (scope: ca. 20 pages, processing period: max. 15 weeks) on Applied Energy & Climate Finance (Examination number: 61524) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment components may be produced in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment components are assessed and how the module grade is calculated.</p> <p>Assessment components:</p> <ul style="list-style-type: none"> • Presentation and complementary report on Applied Energy & Climate Finance, weighting 1 • Seminar paper on Applied Energy & Climate Finance, weighting 1
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	261034-310 (version 01)
Module name	Advanced Digital Finance
Module coordinator	Professorship Business Administration – Banking and Corporate Finance
Content and qualification objectives	<p><u>Content:</u></p> <p>As part of the seminar, students will independently and individually work on current topics in the field of digital finance and present the results in a seminar paper and a presentation. Topics include new, digital asset classes and their financial integration, transformation processes in the financial industry due to digitalization, further development of inline services, integration of machine learning/artificial intelligence for investment decisions and risk management, big data analytics and other topics of modern finance. The seminar also provides in-depth fundamentals in the methodology of scientific work and presentation.</p> <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to independently work on, present and defend a scientific task from a research area or the interface between research areas within a given time.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Advanced Digital Finance (2 teaching units) <p>The class may be conducted in German or in English.</p>
Requirements for participation (recommended knowledge and skills)	<ul style="list-style-type: none"> • Recommended: knowledge of financing and financial management • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of two assessment components. The student must take the following specific assessment components:</p> <p>Creditable study achievements:</p> <ul style="list-style-type: none"> • 20-minute presentation and 5-minute complementary report on Advanced Digital Finance (Examination number: 61525) • Seminar paper (scope: ca. 20 pages, processing period: max. 15 weeks) on Advanced Digital Finance (Examination number: 61526) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment components may be produced in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment components are assessed and how the module grade is calculated.</p> <p>Assessment components:</p> <ul style="list-style-type: none"> • Presentation and complementary report on Advanced Digital Finance, weighting 1 • Seminar paper on Advanced Digital Finance, weighting 1
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	220000-020 (version 02)
Module name	Mathematical models in economics (Mathematische Modelle in den Wirtschaftswissenschaften)
Module coordinator	Dean of Student Affairs for all degree programs of the faculty of Mathematics (except for the degree programs Data Science, MINT, Advanced and Computational Mathematics)
Content and qualification objectives	<p><u>Content:</u> Basic concepts of mathematical economics (consumption behavior, production management, market equilibrium, commodity pricing, location planning, allocation of raw materials, etc.), Linear, discrete, stochastic, dynamic and game theory models from micro- and macroeconomics, such as input-output analysis, discrete selection experiments, economic growth, oligopoly, diffusion of innovations, income inequality, etc.</p> <p><u>Qualification objectives:</u> Students are able to model problems with economic relevance. They can classify and analyze them with adequate mathematical tools. Students are aware of the limited interpretability of the obtained results and know about the importance of model assumptions. They may slightly adjust the models they have learned about and discuss that in a mathematically precise way.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Mathematical models in economics (Mathematische Modelle in den Wirtschaftswissenschaften) (4 teaching units) • Exercise course: Mathematical models in economics (Mathematische Modelle in den Wirtschaftswissenschaften) (2 teaching units) <p>The classes may be conducted in German or in English.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	<p>Meeting the admission requirement for the assessment component and successfully passing the module examination are prerequisites for the awarding of credit points.</p> <p>The admission requirement is the following examination prerequisite (no limit to the number of attempts):</p> <ul style="list-style-type: none"> • Proof for complete exercise tasks on Mathematical models in economics (Mathematische Modelle in den Wirtschaftswissenschaften) amounting to a total of 120 assessment units (per student in the case of teamwork). Proof is provided if at least 50% of the assessment units are proved.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 30-minute oral examination on Mathematical models in economics (Mathematische Modelle in den Wirtschaftswissenschaften) (Examination number: 20077) <p>The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 10 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year in the winter semester.
Number of hours	The module requires students to complete a total of 300 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	220000-333 (version 02)
Module name	Mathematical Foundations of Big Data Analytics (Mathematische Grundlagen von Big Data Analytics)
Module coordinator	Dean of Student Affairs for the Master's programme Data Science of the Faculty of Mathematics
Content and qualification objectives	<p><u>Content:</u></p> <p>The defining feature of Big Data is that the amount of data to be processed is too large, too complex, too fast-moving or too weakly structured to be evaluated with manual or conventional methods of data processing. This module presents basic mathematical models in the field of Big Data Analytics as well as an application-oriented reference to relevant economic issues. It explains mathematical tools from applied mathematics (in particular numerical linear algebra, statistics, optimization, game theory, graph theory, common differential equations) and applies them to current problems of data analysis in the economic context.</p> <p><u>Qualification objectives:</u></p> <p>The students acquire basic methodological and technology-specific knowledge and skills in the fields of Business Intelligence and Business Analytics for the analysis of data within companies. They are able to purposefully evaluate structured data sets using the available methods and technologies as well as interpret the resulting consequences. In addition, students will learn about the uses and challenges of Big Data, acquire basic knowledge of the technologies and be able to apply mathematical models suitable for economic problems.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Mathematical Foundations of Big Data Analytics (Mathematische Grundlagen von Big Data Analytics) (2 teaching units) • Exercise course: Mathematical Foundations of Big Data Analytics (Mathematische Grundlagen von Big Data Analytics) (1 teaching unit) <p>The classes may be conducted in German or in English.</p>
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • 30-minute oral examination on the content of the module (Examination number: 22607) <p>The assessment component must be taken in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered every second academic year in the summer semester.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	262032-302 (version 01)
Module name	Computational Economics II
Module coordinator	Professorship Economics – Microeconomics
Content and qualification objectives	<p><u>Content:</u></p> <ul style="list-style-type: none"> • Use of advanced computer-aided methods to analyze economic issues • Preparation of data for specific analysis techniques • Natural language processing techniques and their application in the context of economic research • Application of a variety of advanced calculation techniques to economic problems in a programming language <p><u>Qualification objectives:</u></p> <p>After successful completion of the module, students are able to work on more complex economic problems using methods from computational economics. They are able to use data in an appropriate way and prepare it for use if necessary. They know solutions to typical problems in computational economics (long computation times, Curse of Dimensionality, non-reproducibility of calculations due to stochastic influences). They are familiar with some approaches to natural language processing.</p>
Teaching methods	<p>The module teaching methods are lecture and exercise course.</p> <ul style="list-style-type: none"> • Lecture: Computational Economics II (1 teaching unit) • Exercise course: Computational Economics II (1 teaching unit) <p>The classes will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	<p>Required previous knowledge:</p> <ul style="list-style-type: none"> • Fundamental knowledge of programming and Computational Economics, e.g. Module Computational Economics I (Module 262032-202) • See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • Creditable study achievement: Completion of five programming tasks during the semester as well as corresponding written assignments (scope: ca. 2 pages per assignment) on Computational Economics II (Examination number: 63324) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment components may be produced in German or in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Annex 2: Module description for the Consecutive Degree Programme in Business & Economics leading to the award of Master of Science

This document is a translated version and legally not binding. Only the study documents published in the official announcements of Chemnitz University of Technology are legally binding.

Specialization module

Module number	262034-310 (version 01)
Module name	Seminar Macroeconomics
Module coordinator	Professorship Economics – Macroeconomics
Content and qualification objectives	<p><u>Content:</u> In the seminar, current topics from areas of macroeconomics are independently worked on as part of individual or team work.</p> <p><u>Qualification objectives:</u> After successful completion of the module, students are able to independently work on a scientific assignment within a given time. In the case of teamwork, social skills are promoted through collective editing and coordination.</p>
Teaching methods	<p>The module teaching method is the seminar.</p> <ul style="list-style-type: none"> • Seminar: Macroeconomics (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	See the list of course materials
Module application	The module is suitable for all degree programs with an economic orientation.
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • Creditable study achievement: written paper (scope: ca. 15 pages, processing period: 16 weeks) and 20-minute presentation on the seminar Macroeconomics (Examination number: 63408) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Supplementary module

Module number	260000-430 (version 01)
Module name	Study Abroad I
Module coordinator	Dean of Student Affairs for the Master's programme Business & Economics
Content and qualification objectives	<p><u>Content:</u></p> <p>During their studies abroad, students attend courses at the host university that are thematically related to the areas of specialization of the degree programme. The module thus aims to complement and expand on the content of the modules completed at Chemnitz University of Technology. The content of the courses chosen at the host university refer to topics in the areas of economics and business administration. The exchange programme can be taken up within the usual application and award procedures for stays abroad.</p> <p><u>Qualification objectives:</u></p> <p>After successfully studying abroad at the host university, students are able to shape interactions independently and effectively in the chosen educational area. They have expanded their language skills, learned about the academic life in the host country and thus acquired a broader, country-specific competence for action. At the same time, they are prepared for the demands of a modern, internationally networked job market.</p>
Teaching methods	The module teaching methods are the courses of the host university.
Requirements for participation (recommended knowledge and skills)	none
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <ul style="list-style-type: none"> • Crediting of the assessment component documented in the transcript of records. The Examination Board is responsible for the crediting of the assessment component. (Examination number: I_M_BE-0001)
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.

Supplementary module

Module number	271413-014 (version 01)
Module name	Academic Skills
Module coordinator	English language acquisition coordinator (language practice)
Content and qualification objectives	<p><u>Content:</u></p> <p>The module helps students to further develop their already very good oral and written English-skills. It is aimed at enabling students to communicate in the academic world in a manner appropriate to the situation and target group.</p> <p>English for Academic Purposes offers basic and advanced skills for academic work in English: Students practice how to access relevant academic resources and gather specific information. Particular attention is paid to recognizing "predatory publishers". In addition, students will familiarize themselves with the challenges of academic writing by being confronted with various rhetorical and stylistic elements typical for academic texts. Because of the key role that academic writing plays in communication research findings and engaging with the research community, strategies for writing an academic paper are developed several times throughout the semester. Students will also be assisted in structuring their self-study. Furthermore, students are familiarized with various citation standards ("APA", "MLA", and "Unified Style Sheet for Linguistics") and learn skills necessary to transfer academic writing in one of these styles.</p> <p><u>Qualification objectives:</u></p> <p>Students can learn independently and in a self-organized manner. They can critically analyze scientific texts. They learn vocabulary and formulations as well as advice on the layout and structure of a scientific paper and can apply these to their own research work. Students will be able to write an article for a scientific journal using appropriate rhetoric and style. In addition, they are able to gain access to a variety of academic sources and recognize predatory publishers.</p>
Teaching methods	<p>The module teaching method is the exercise course.</p> <ul style="list-style-type: none"> Exercise course: English for Academic Purposes (2 teaching units) <p>The class will be conducted in English.</p>
Requirements for participation (recommended knowledge and skills)	Students must be able to follow and actively participate in the course in English.
Module application	---
Requirements for the award of credit points	Successfully passing the module examination is required for the awarding of credit points.
Module examination	<p>The module examination consists of one assessment component.</p> <p>Creditable study achievement:</p> <ul style="list-style-type: none"> Two written tasks on the exercise course English for Academic Purposes (scope: ca. 1200 words/2-3 pages each, processing period: 4 weeks each) (Examination number: 71629) <p>The study achievement is credited, if it is graded at least "sufficient".</p> <p>The assessment component must be taken in English.</p>
Credits and grades	<p>This module is worth 5 credit points.</p> <p>Section 10 of the Examination Regulations specifies how the assessment component is assessed and how the module grade is calculated.</p>
Frequency	The module is offered each academic year.
Number of hours	The module requires students to complete a total of 150 study hours.
Module duration	Under normal circumstances, the module is completed in one semester.
