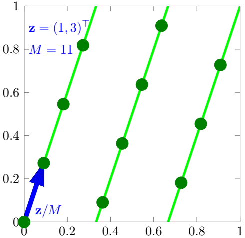
Trigonometric polynomials - fast approximation

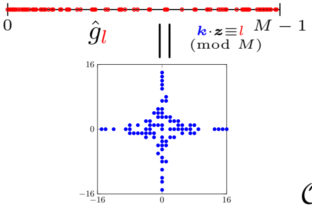
- reconstructing rank-1 lattice for I,

$$\boldsymbol{x}_j := \frac{j}{M}\boldsymbol{z} \bmod \mathbf{1};\ j = 0, \ldots, M-1$$

- approximation of function $f\colon \mathbb{T}^d \to \mathbb{C}$ by multivariate trigonometric polynomial $p(\boldsymbol{x}) = \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \mathrm{e}^{2\pi\mathrm{i}\boldsymbol{k}\cdot\boldsymbol{x}}$



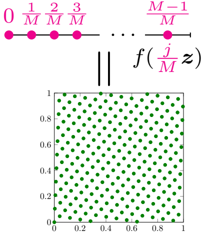
- [Kuo, Sloan, Woźniakowski 06] [Kämmerer, Potts, V. 15] [Byrenheid, Kämmerer, Ullrich, V. 16]



$(\hat{p}_{\boldsymbol{k}})_{\boldsymbol{k}\in I}$

1-dim
$\longleftarrow$
iFFT

$$\mathcal{O}(M \log M + d|I|)$$



$(f(\boldsymbol{x}_j))_{j=0}^{M-1}$

Unknown frequency index set

until now: fast reconstruction of $p(\boldsymbol{x}) := \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \, \mathrm{e}^{2\pi \mathrm{i} \boldsymbol{k}\cdot\boldsymbol{x}}$ or fast approximation of function $f(\boldsymbol{x}) \approx p(\boldsymbol{x})$

- given frequency index set I
- compute $\hat{p}_{\boldsymbol{k}}$ from samples along reconstructing rank-1 lattice

Unknown frequency index set

until now: fast reconstruction of $p(\boldsymbol{x}) := \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \,\mathrm{e}^{2\pi \mathrm{i}\boldsymbol{k}\cdot\boldsymbol{x}}$ or
fast approximation of function $f(\boldsymbol{x}) \approx p(\boldsymbol{x})$

- given frequency index set I
- compute $\hat{p}_{\boldsymbol{k}}$ from samples along reconstructing rank-1 lattice

next: unknown I

- search for location I of largest Fourier coefficients of f or non-zero Fourier coefficients of p
  (and compute Fourier coefficients $\hat{p}_{\boldsymbol{k}}$, $\boldsymbol{k} \in I$)

Unknown frequency index set

until now: fast reconstruction of $p(\boldsymbol{x}) := \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \, \mathrm{e}^{2\pi\mathrm{i}\boldsymbol{k}\cdot\boldsymbol{x}}$ or
fast approximation of function $f(\boldsymbol{x}) \approx p(\boldsymbol{x})$

- given frequency index set I
- compute $\hat{p}_{\boldsymbol{k}}$ from samples along reconstructing rank-1 lattice

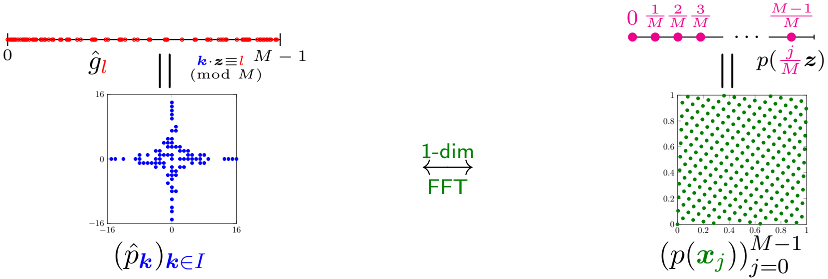
next: unknown I

- search for location I of largest Fourier coefficients of f or non-zero Fourier coefficients of p
  (and compute Fourier coefficients $\hat{p}_{\boldsymbol{k}}$, $\boldsymbol{k} \in I$)
- search domain: (possibly) large index set $\Gamma \subset \mathbb{Z}^d$, e.g.,
  full grid $\hat{G}_N^d := \{\boldsymbol{k} \in \mathbb{Z}^d \colon \|\boldsymbol{k}\|_\infty \le N\}$, ($|\hat{G}_{64}^{10}| \approx 1.28 \cdot 10^{21}$)

High-dim. sparse FFT via 1-dim. sparse FFT

General idea: use rank-1 lattice and 1-dim. sparse FFT

- Interpret $p(\boldsymbol{x}_j) = \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \mathrm{e}^{2\pi\mathrm{i}(\boldsymbol{k}\cdot\boldsymbol{z})\frac{j}{M}} =: \tilde{p}(\frac{j}{M})$
  as evaluation of 1-dim. trigonometric polynomial $\tilde{p}\colon \mathbb{T} \to \mathbb{C}$
  with frequencies $\boldsymbol{k}\cdot\boldsymbol{z} \bmod M$ at nodes j/M

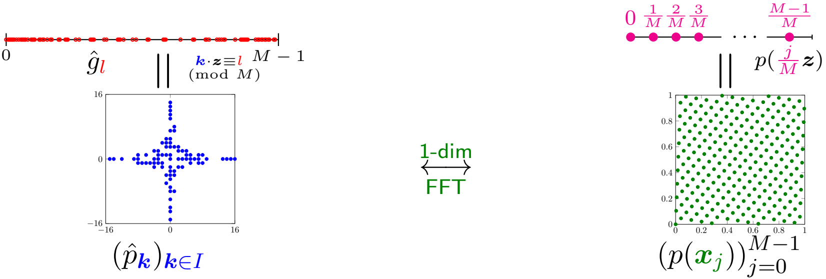


High-dim. sparse FFT via 1-dim. sparse FFT

General idea: use rank-1 lattice and 1-dim. sparse FFT

- Interpret $p(\boldsymbol{x}_j) = \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \mathrm{e}^{2\pi\mathrm{i}(\boldsymbol{k}\cdot\boldsymbol{z})\frac{j}{M}} =: \tilde{p}(\frac{j}{M})$
  as evaluation of 1-dim. trigonometric polynomial $\tilde{p}\colon \mathbb{T} \to \mathbb{C}$
  with frequencies $\boldsymbol{k}\cdot\boldsymbol{z} \bmod M$ at nodes j/M

$\Rightarrow$ reconstructing rank-1 lattice for $\Gamma \supset I$ gives injective mapping of multi-dim. frequencies to 1-dim. frequencies,
$\Gamma \subset \mathbb{Z}^d \to \{0, 1, \ldots, M-1\}$, $\boldsymbol{k} \mapsto \boldsymbol{k}\cdot\boldsymbol{z} \bmod M$



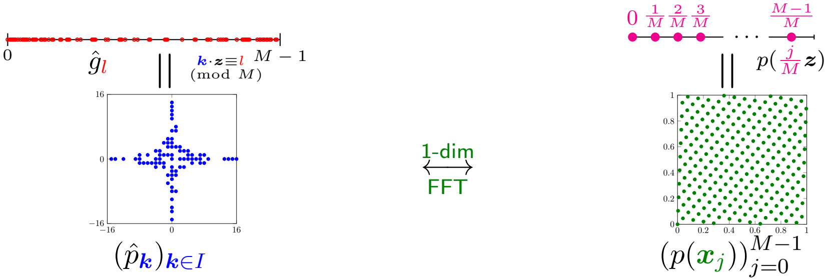
High-dim. sparse FFT via 1-dim. sparse FFT

General idea: use rank-1 lattice and 1-dim. sparse FFT

- Interpret $p(\boldsymbol{x}_j) = \sum_{\boldsymbol{k}\in I} \hat{p}_{\boldsymbol{k}} \mathrm{e}^{2\pi\mathrm{i}(\boldsymbol{k}\cdot\boldsymbol{z})\frac{j}{M}} =: \tilde{p}(\frac{j}{M})$ as evaluation of 1-dim. trigonometric polynomial $\tilde{p}\colon \mathbb{T} \to \mathbb{C}$ with frequencies $\boldsymbol{k}\cdot\boldsymbol{z} \bmod M$ at nodes j/M

$\Rightarrow$ reconstructing rank-1 lattice for $\Gamma \supset I$ gives injective mapping of multi-dim. frequencies to 1-dim. frequencies, $\Gamma \subset \mathbb{Z}^d \to \{0,1,\ldots,M-1\}$, $\boldsymbol{k} \mapsto \boldsymbol{k}\cdot\boldsymbol{z} \bmod M$

$\Rightarrow$ 1-dim. sparse FFT methods can be applied



High-dim. sparse FFT via 1-dim. sparse FFT

usage of 1-dim. sparse FFT methods based on e.g.

	samples	computational costs
compressed sensing	$\mathcal{O}\left(\lvert I\rvert \log^4(M) \log(1/\eta)\right)$	$\mathcal{O}\left(M \, \lvert I\rvert \log^4(M) \log(1/\eta)\right)$
	[Rauhut 07] [Kunis, Rauhut 08] [Gröchenig, Pötscher, Rauhut 10] [Foucart, Rauhut 13] ...	
filters	$\mathcal{O}\left(\lvert I\rvert (\log M)(\log(M/\lvert I\rvert))\right)$	$\mathcal{O}\left(\lvert I\rvert (\log M)(\log(M/\lvert I\rvert))\right)$

spatial nodes	rank-1 lattice $\boldsymbol{x}_j = \frac{j}{M}\boldsymbol{z} \bmod 1$	rank-1 Chebyshev lattice $\boldsymbol{x}_j = \cos\left(\frac{j}{M}\pi\boldsymbol{z}\right)$ [Poppe,Cools 12]

Non-periodic case

results can be transfered from periodic to non-periodic case:

- multivariate algebraic polynomial $p : [-1,1]^d \to \mathbb{R}$ in Chebyshev form with frequencies supp. on $I \subset \mathbb{N}_0^d$, $|I| < \infty$,

$$a(\boldsymbol{x}) = \sum_{\boldsymbol{k} \in I} \hat{a}_{\boldsymbol{k}} \prod_{t=1}^{d} T_{k_t}(x_t), \quad \hat{a}_{\boldsymbol{k}} \in \mathbb{R},$$

	periodic	non-periodic
basis function	$\mathrm{e}^{2\pi\mathrm{i}\boldsymbol{k}\cdot\boldsymbol{x}}$	$\prod_{t=1}^{d} T_{k_t}(x_t)$
spatial nodes	rank-1 lattice $\boldsymbol{x}_j = \frac{j}{M}\boldsymbol{z} \bmod \mathbf{1}$	rank-1 Chebyshev lattice $\boldsymbol{x}_j = \cos\left(\frac{j}{M}\pi\boldsymbol{z}\right)$ [Poppe,Cools 12]
evaluation / reconstruction	1-dim. FFT [Li, Hickernell 03] / [Kämmerer, Kunis, Potts 12]	1-dim. DCT [Cools, Poppe 11] [Potts, V. 15] / [Kämmerer 13] [Potts, V. 15]

Non-periodic case - related work

polynomial approximation on Lissajous curves [Bos, De Marchi, Vianello 15]

- $\ell_{\boldsymbol{z}}(t) := (\cos(z_1 t), \ldots, \cos(z_d t))$, $t \in [0, \pi]$
- rank-1 Chebyshev lattice if $t = 0, \pi/M, 2\pi/M, \ldots, \pi$
- results for algebraic polynomials of
  total or maximum degree $\leq n$

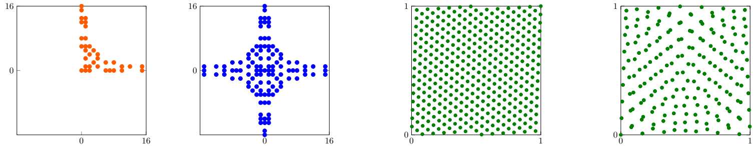
Non-periodic case - related work

polynomial approximation on Lissajous curves [Bos, De Marchi, Vianello 15]

- $\ell_{\boldsymbol{z}}(t) := (\cos(z_1 t), \ldots, \cos(z_d t))$, $t \in [0, \pi]$
- rank-1 Chebyshev lattice if $t = 0, \pi/M, 2\pi/M, \ldots, \pi$
- results for algebraic polynomials of total or maximum degree $\leq n$
- case $d = 2$
  - Padua point set, e.g. [Bos, Caliari, Marchi, Vianello, Xu 06] $\mathcal{A}_n := \{\boldsymbol{x}_j := (\cos(j\pi/(n+1)), \cos(j\pi/n))^\top : j = 0, \ldots, M\}$
  - $\mathcal{A}_n = \mathrm{CL}(\boldsymbol{z}, M)$, where $\boldsymbol{z} := (n, n+1)^\top$ and $M := n\,(n+1)$
  - exact reconstruction of arbitrary 2d algebraic polynomial of total degree $\leq n$

Relation to tent-transformed rank-1 lattices

- tent-transformed rank-1 lattices
  $P_\psi(\boldsymbol{z}, M) := \{\psi(j\boldsymbol{z}/M \bmod \boldsymbol{1})\colon j = 0, \ldots, M-1\}$
  [Dick, Nuyens, Pillichshammer 14], [Suryanarayana, Nuyens, Cools 15], [Cools, Kuo, Nuyens, Suryanarayana 16]
- tent transform $\psi\colon [0,1] \to [0,1]$, $\psi(x) := 1 - |2x-1|$
- functions $g\colon [0,1]^d \to \mathbb{R}$, $g(\boldsymbol{x}) := \sum_{\boldsymbol{k}\in I} g_{\boldsymbol{k}} \phi_{\boldsymbol{k}}(\boldsymbol{x})$, $I \subset \mathbb{N}_0^d$,
- half-periodic cosine functions $\phi_{\boldsymbol{k}}(\boldsymbol{x}) := \prod_{t=1}^{d} \sqrt{2}^{\delta_{0,k_t}} \cos(\pi k_t x_t)$, $\boldsymbol{k} \in \mathbb{N}_0^d$, ONB of $L_2([0,1]^d)$
- reconstructing rank-1 lattice $\mathrm{R1L}(\boldsymbol{z}, M)$ for $\mathcal{M}(I)$
- reconstruction from samples $g\left(P_\psi(\boldsymbol{z}, M)\right)$ with 1-dim FFT
- polynomials g are not algebraic polynomials in general



I $\quad$ $\mathcal{M}(I)$ $\quad$ reco. $\mathrm{R1L}(\boldsymbol{z}, M)$ $\quad$ $P_\psi(\boldsymbol{z}, M)$

Summary

- **known** (arbitrary) frequency index set via rank-1 lattices
  - fast evaluation / reconstruction of trigonometric polynomials
    [Li, Hickernell 03] / [Kämmerer, Kunis, Potts 12] [Kämmerer 13]
  - approximation of periodic functions
    [Kuo, Sloan, Woźniakowski 06] [Kämmerer, Potts, V. 15] [Byrenheid, Kämmerer, Ullrich, V. 16]
  - fast evaluation / reconstruction of algebraic polynomials
    [Cools, Poppe 11] [Potts, V. 15] / [Potts, V. 15]
  - approximation of non-periodic functions
    [Dick, Nuyens, Pillichshammer 14] [Suryanarayana, Nuyens, Cools 15]
    [Cools, Kuo, Nuyens, Suryanarayana 16]
- **unknown** frequency index set via rank-1 lattices
  - high-dim. sparse FFT via rank-1 lattice and 1-dim. sparse FFT
    e.g. [Potts, Tasche, V. 16]
  - sparse dimension-incremental FFT based on rank-1 lattices (periodic and non-periodic)
    [Potts, V. 15] [V. 17]
